YASH SAVALIYA

DATA ANALYST | SQL | PYTHON | POWER BI | TABLEAU

Ahmedabad, Gujarat, India | +91-8104017448 | tpyashsavaliya13092002@gmail.com | Portfolio

PROFESSIONAL SUMMARY

Data Analyst with a B.Tech in Information Technology and hands-on experience querying, optimizing and troubleshooting production data on multi-tenant SaaS platforms (**SQL Server, PostgreSQL, Azure SQL**). Skilled in **Advanced SQL, Python (Pandas), Excel, Power BI and Tableau** for **data cleaning, EDA, KPI reporting and dashboard development**. Cleaned and analyzed **5,478 real estate projects** end to end, and uses incident and performance data to find root causes and support **data-driven decisions**.

TECHNICAL SKILLS

Analytics & BI: Advanced SQL (window functions, CTEs, multi-step aggregations), **Python** (**Pandas**), **Excel** (PivotTables, slicers, XLOOKUP), **Power BI** (DAX in progress), **Tableau**

Methods: Data Cleaning, **Data Transformation**, **ETL**, **Exploratory Data Analysis**, **Statistical Analysis**, **Data Modeling**, Cohort Analysis, Trend Analysis, Variance Analysis, Root-Cause Analysis

Reporting: Dashboard Development, **KPI Reporting**, **Data Visualization**, Business Reporting, Data Quality Checks

Databases & Tools: SQL Server, PostgreSQL, Azure SQL, Oracle, Git, Azure; software background in C#/.NET

PROJECTS

Ahmedabad Real Estate (RERA) Market & Cost Variance Analytics

Tools: Excel, PivotTables, Slicers, Data Cleaning & ETL | Live dashboard | Project details

- Analyzed **5,478 registered Ahmedabad RERA projects** covering approximately **₹2.57 lakh crore** in reported capital investment.
- **Cleaned and validated** records across **38 attributes**, standardized date and cost fields, and built **data-quality checks** for completeness, schema consistency and anomalies.
- Created project-duration metrics and timeline cohorts, identifying a dominant **3–5 year completion band (53.2%)**.
- Built **estimated-versus-actual cost variance analysis**, multi-dimensional PivotTables, interactive slicers and an executive-style **Excel dashboard**, also published as a live web dashboard.

SaaS Reliability & Incident Intelligence

Tools: Python, Pandas, NumPy, Advanced SQL | Live dashboard | Code

- **Business problem:** a SaaS company receives thousands of alerts but struggles to find recurring incidents, SLA risks and unreliable services. Used a **clearly disclosed synthetic dataset** of 4,200 incidents and 52,000 alerts (no employer data).
- Validated and analyzed the data with **Python/Pandas** and **Advanced SQL** (window functions, CTEs), cross-checking results between both, to measure **MTTR**, **SLA compliance (91.3%)**, root causes, peak times and per-tenant downtime.
- Found that the top 5 root causes drive **38.3%** of incidents, **34%** repeat within 7 days, and 6 noisy alert rules generate **60.7%** of alert volume; recommended runbooks and alert tuning in an interactive dashboard.

WORK EXPERIENCE

iTechOps, Ahmedabad — Full Stack .NET Developer (Intern from Jul 2024) | *Nov 2024 – Present*

- Reduced incident **MTTR from 30+ minutes to under 5 minutes (6x)** on a white-label SaaS monitoring platform by tracking resolution KPIs and applying **root-cause analysis**.
- Analyzed volume and failure rates of **14,000+ monthly alerts** across Email, Slack and Teams to design throttling and retry logic.
- Improved database performance by **~30%** through **SQL optimization**, indexing and removal of N+1 queries, guided by slow-query and execution-plan analysis.
- Investigated production data issues (alert misfires, deadlocks, deployment failures) and maintained **zero client SLA breaches**.

EDUCATION

B.Tech, Information Technology, RK University, Rajkot, Gujarat | *Oct 2020 – Jul 2024 | CGPA: 7.49 / 10.0*

CERTIFICATIONS

SQL & Relational Databases 101 (IBM)
